of Syncope

This disease depends upon a diminution or suspension of the motions of the heart.

The symptoms are a sense of languor, and anxiety about the heart, giddiness & dimness of sight, noise in the ears, quick, weak or absent pulse, paleness, coldness of the hands & feet, cold sweat on the forehead, a cessation or suspension of the animal functions of sense & motion. ^{During the} recovery from syncope, we observe a continuance of the anxiety about the heart, vomiting, and convulsions. —

Women are more subject to this ^{disease} than men. It is sometimes a hereditary and now I have a family disease. It is remarkable, it does not shorten life. I knew a citizen of Philadelphia who lived to be 90, who had been afflicted with it for

40 years.

Its Causes are local & general. The former are Annular, polypos, Dropsy & ossification of the heart, or a disease in some of the large blood vessels that are contiguous to it. Syncope from these Causes ^{is for the most part} ~~is~~ ^{is} innumerable. It may be known by its not having any ~~very~~ long warnings, and by being induced by light Causes.

The general Causes are such as act upon the whole System. These are

- 1 Profuse Natural or Artificial hemorrhages.
- 2 Great inattention from any Cause.
- 3 Exquisite pain, or the ^{sudden} ~~the~~ cessation of it.
- 4 Violent emotions of the mind.
- 5 Disagreeable sights & bad odors.
- 6 Certain Antipathies to things not naturally

4

opening doors & windows, and permitting as
many persons as possible to be near the person
affected. 3. Cold water sprinkled on the face.

4. Applying stimulating substances to the nose
such as volatile salt, snuff & burnt feathers.
5. Frictions to the whole body.

6. Stimulating injections into the bowels, &
7. Stimulating applications to the feet, and
other parts of the body that possess great sensi-
-bility, or ~~retains~~ a prompt & extensive
sympathy with the whole body.
~~to be treated~~ & the removal of all its exciting
causes.

There are several cases of Syncope which
require specific & appropriate remedies in
addition to those which have been mentioned.
& when the disease arises from great heat
the ~~remedies should~~ the hands & feet should be
put into ~~warm~~ water heated above the
heat of the body. —

2 when Syncope arises from ⁵ Cold Drinking
Cold Liquors, ~~the~~ Laudanum ~~the~~ or Astringent
Spirits should be given in liberal doses.

II. To prevent the recurrence of Syncope
the Remedies should be exercise, the Cold
Baths, Chalybeates, Lime, Bark, and a habit
gradually acquired of resisting all its remote
and existing causes.

[Faint, illegible handwriting visible through the paper, likely bleed-through from the reverse side.]

on suspended animation.

There are two grades of apparent death. ^{one} ~~The~~ ~~first~~ has been called by the common people, a Trance, the other Asphyxia. In the former the whole body apparently dies, except ~~that~~ ^{those} parts in which the sense of hearing, and the mind are seated, and which in consequence ~~things~~ still retain some degree of activity. As the disease generally comes on in the close of a fit of sickness at a time when the thoughts are wholly directed to the world of spirits, the mind in a Trance from the habit it has recently acquired, continues to dwell upon the scenes of happiness or misery which it had anticipated, and which from its debilitated state it now supposes to be present. After such persons recover, they honestly relate

relate as genuine visions or revelations, what
 they have dreamed, or seen only as more illusi-
 -ous, or vivid exercises of the mind shut up
 in the brain. Or, if they are not induced by
 the previous train of thinking of the sick
 person, the conversations which ^{usually} take place in
 the same room with the apparently dead
 body, may suggest them, for they are generally
 upon subjects related to those which are
 supposed to be visions or revelations. A
 certain Thomas Lay formerly of this city ^{lay}
 who lay ^{as a} ~~in this situation of a~~
~~a day~~ for some time ^{as a} ~~in this situation of a~~
 dead man, after his resuscitation mentioned
 the names of two persons who had died while
 he was in that situation, one of whom
 he said he saw in a place of happiness, & the
 other in the state of misery. This ~~was~~
 knowledge was

[Faint, illegible handwriting in a cursive script, likely from the 18th or 19th century. The text is written in a single column and appears to be a letter or a journal entry.]

[Faint, illegible handwriting on the right margin, possibly a list or a continuation of the text from the main body.]

9
supposed by himself, and his friends to be
~~miraculous~~ communicated to him in a
supernatural manner, but there can be
but little doubt but that he heard their deaths
spoken of in the room in which his body
was laid out, and that he fixed them in ^a the
state of happiness and misery from his previous
knowledge of their moral character, or from
his having heard ^{what they were} of them from the persons
who mentioned the accounts of their deaths.

In the
~~first~~ second grade of ~~Asphy~~ suspended Animation
~~which~~ ^{has been} called Asphixia, there is ^a ~~total~~
~~total~~ absence of heat, sensation, and apparently
of motion, as also of all the exercises of the
mind. Its causes are
1. Offensive matters in the stomach. Half
baked bread induced it in a gentleman of this

[Faint, mostly illegible handwriting in a cursive script, likely from an 18th-century manuscript. The text is written in brown ink on aged, slightly discolored paper. Some words are more legible than others, but the overall content is difficult to discern.]

[Marginal notes on the right side of the page, continuing the handwriting from the main text or providing additional commentary. The notes are also in cursive and mostly illegible.]

which arises from ^{the} ~~its~~ passage ^{of the heat} from the internal to the external parts of the body. This heat soon passes away, and is very different from that which continues for 12 or 24 hours after death.

5 Sweats on any part of the body.

6 The Discharge of Urine & Stools.

7 The Appearance of Vapor upon a looking glass held before the mouth.

8 The Appearance of motion upon the surface of a tumbler of water placed upon the ensiform Cartilage.

Life may be suspended with the absence of all these signs, and death may be real where most of them take place. Of this I have seen several instances in the course

[Faint, mostly illegible handwriting in cursive script, likely bleed-through from the reverse side of the page. The text appears to be organized into several paragraphs.]

of my practice. ~~The body generally dissolved in~~
~~the~~ All the signs that have been mentioned
 indicate partial life, and when not, ^{seated in very} ~~in~~ imitable
 parts, or connected with them by strong
 Affinities, they soon perish, nor can life
 often be restored by the Application of the
 most powerful Stimulants to them.

~~The Remedies for better than of~~
~~some~~ I shall begin the Cure of suspended
 Animation by ^{first} mentioning the Remedies
 for what has been called Asphixia. In
 doing so, I shall take notice of such as
 are proper for it from its Causes generally.
^{and} I mention such as proper for it from
 each of its Causes.

To the
 I head belong
 1 placing the body in an easy & natural

V that inflating the lungs with re-
-spirid Air has a greater power of
reviving life, ~~than~~ than pure Atmos-
-pherical Air. New born infants are
resuscitated in this way. It is probable
the same good effects would not be
produced by means of Common Air.
Linnæus revived his youngest daughter
who was apparently dead born by blow-
-ing his breath into her lungs. There
is an account in the German Ephē-
-merides of a woman being revived
in the same way. { It is probable
go to #

and stripping it of such Cloathing, and ligatures employed in Dress, as may tend to retard the return of life.

2 Warmth & frictions to every part of the body. They should be gentle or forcible, according to the supposed Accumulation, or expenditure of excitability by the sudden or gradual Suspension of life. They should be ~~also~~ gentle in the former, & forcible in the latter case.

3 Inflating the lungs with air by placing the Nostril ~~in~~ a pair of bellows in One Nostril, and stopping the Other. This practice is founded upon the necessity & importance of Air in beginning and supporting Animal life. There are facts that make it probable ✓

[illegible]

~~4 Stimulating Glysters of large Quantities
of Air or Water, or small Quantities
of Substances that act by their Quality.~~

4 Glysters that Stimulate by their
Quantity as Air or Water, or by their
Quality as Spirit of Turpentine, Wine
and Ardent Spirits. The resuscitation of
the Pharaonite Son ~~was~~ mentioned
in the Old Testament was effected by in
part by these means. The words which
contain the history of this went are as follows.
"And the went up and lay upon the Child, &
put his mouth upon his mouth, & his eyes
upon his eyes, and his hands upon his
hands, and he stretched himself upon the Child
and the flesh of the Child waxed warm." This
process was repeated after a short interval,

[Faint, illegible handwriting on lined paper, possibly bleed-through from the reverse side. The text is written in cursive and spans most of the page.]

[Faint handwriting visible on the edge of the adjacent page to the right.]

upon which we are told the Child forced
 sometimes & opened its eyes." Kings 11. Ch. 5.
 V. 34 & 35. I have said the resuscitation of this
 Child was effected probably by these natural
 means, but an efficacy was no doubt
 imparted to them by a supernatural power.
 It is in this way we often find a Concur-
 -rence of natural and supernatural power
 in many of the events recorded in the old
 and new testaments. Perhaps the expired
 Air employed in all the Cases that have
 been mentioned acts more certainly than
 atmospherical Air from its being somewhat
reduced, and thus more accommodated to the
 excitability of the lungs.]

4 Stimulating Substances conveyed into
 the ^{Stomach} ~~lungs~~ by means of a tube contrived
 for that purpose &c are calculated to

V 6 Stimulating applications to the ~~skin~~
external parts of the body. I have read an
account of a young man who had lain
three days in a state of apparent death, being
revived by pinching a large portion of his
flesh. In this case the muscles were probably
the last retreat of departing life. He did not
revive until some ^{days} after the application of
the remedy. ~~The facts that~~ cutting the
flesh should not be neglected in desperate
cases. This remedy is suggested by the ^{cases of} ~~recor-~~
~~tation~~ that are upon record of persons dissemi-
-nating signs of life, and even recovering after-
-wards from the first incision of a dissecting
knife. If ~~the~~ cutting the flesh be objected to,
boiling water may be applied to the skin.
It will most useful - to the navel, breast &
head.

excite and diffuse Action over the whole body. This tube should be a little bent & so as to enter into the Oesophagus thro' the nose when it cannot be made to enter the mouth.

5 Glysters rendered stimulating by their Quantity such as Air or water, or by their Quality such as Spirit of turpentine, Wine or Aromatic Spirits. The importance of this remedy is suggested by the intestines being ~~the~~ in many instances the last retreat of the departing ~~stimulability~~ of the System.

✓ Certain Stimulants applied to ^{parts endowed} ~~the skin~~ with a peculiar & specific sensibility, such as the ~~ear~~ nose, the ears, the lips, the skin, the navel, the Soles of the feet, ~~the skin~~ & the wind pipe. In favor of ^{several parts} the efficacy of Stimulants to ~~each~~ ^{parts} of these I shall mention ^{some corresponding} ~~some~~ facts.

1 Certain odors such as Vol. Salt, Asafetida, Gar-
-lic or Onions have sometimes produced recupe-
-ration when ^{the Disease} it has been form of a transient

V a ~~funeral hymn~~, ~~and so~~ loud
 in one instance,
 scream, and a funeral hymn have
~~recalled~~ in another have recalled
 life when it was apparently extinct

Nature. I mentioned formerly an instance of hysterical syncope or asphyxia being instantly cured by the pector of a physician's foot.

2 The human voice and sounds of different kinds have ~~not~~ produced recuscitation by exciting impressions upon the ears. A whisper will sometimes have that effect, when loud speaking will do no service. ^{We see something} ~~Talking of the~~ analogous to this, in waking persons from ordinary sleep. The ~~the~~ impressions of the whisper in this case is exactly proportioned to the excitability of the ~~Organ~~ sense of hearing. Talking of the time & place of interesting a person who was supposed to be dead in the same room in which he was laid out as a corpse, suddenly being excited his suspended life. ~~This person~~ ~~was lived & died afterwards~~ Loud voices have sometimes had the same salutary effect. ✓

[Faint, illegible handwriting in cursive script, likely a historical document or letter. The text is written in dark ink on aged, slightly discolored paper. The script is dense and fills most of the page.]

a man who was supposed to have died of a
 bilious fever in Tennessee in the year 1812,
 was put into his coffin, and deposited in
 his grave. ~~Upon~~ The noise of the first
 spadeful of earth that was thrown upon
 his coffin produced a groan that was dis-
 tinctly heard by the person that surrounded
 his grave. The coffin was raised & opened,
 and its tenant taken out, and completely
 restored to life. In all these cases of resuscita-
 tion by impressions made upon the ^{of resuscita-} ~~mind~~,
 the body was in what is called a trance,
 but as the same state of the case and
 mind may take place in Asphyxia, it will
 be proper to make use of them with other
 remedies.

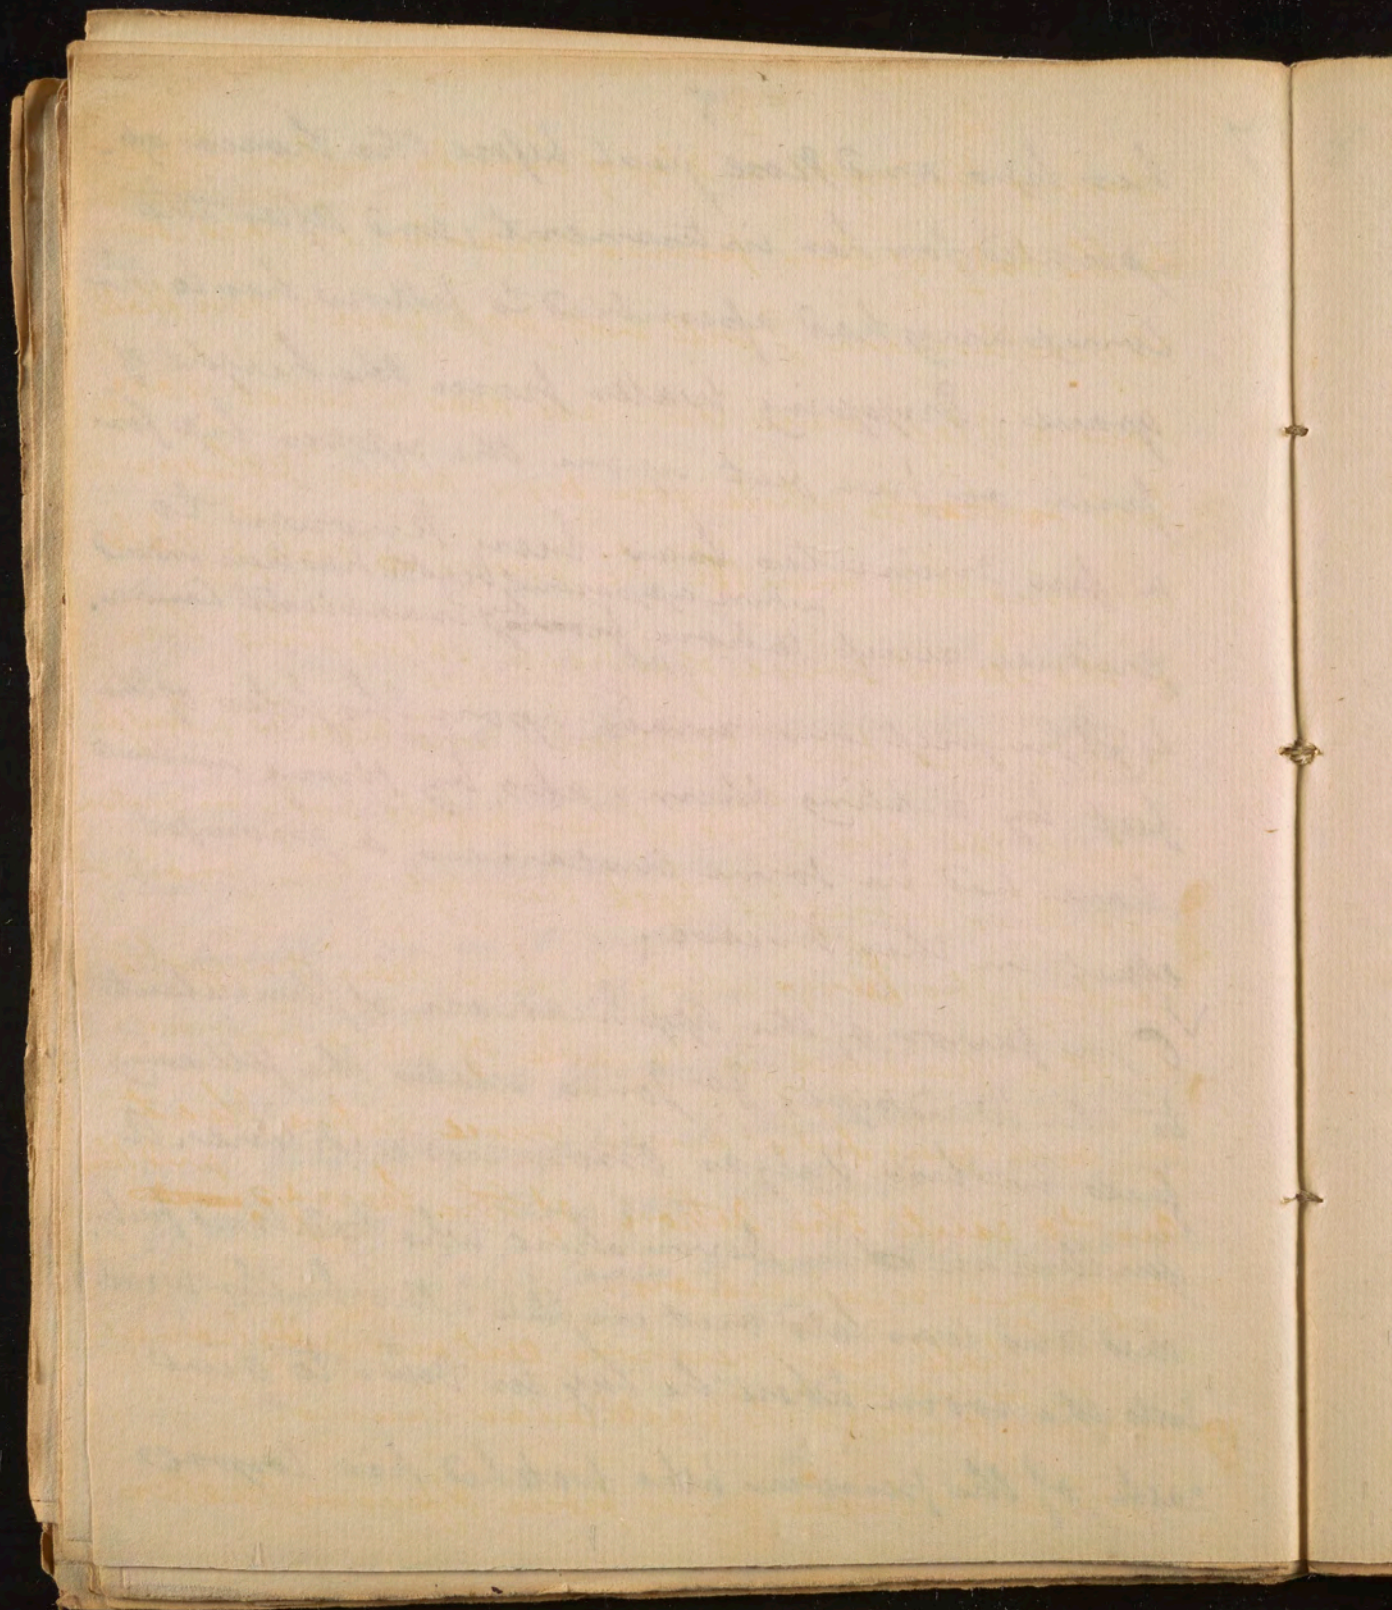

3 The Grandmother of an Irish Gentleman
 now of this City was resuscitated by her lap-
 dog jumping upon her coffin & licking

7
5 V There is a degree of specific sensibility
in the brain. Let one of the inspired
Sylvester alluded to it when he compares
"the fear of the Lord, and departing from evil"
to "health", or as it ought to have been trans-
-lated ^{to} "medicine to the brain" from which
it appears that stimulating medicines
were formerly applied to the ~~brain~~ that part
of the body. — There can be no doubt of their
efficacy in light cases of suspended animation.

7 her lips and nose just before the hour appointed for her interment, and after the company had assembled to follow her to the grave. Dropping water from the height of four or five feet upon the upper lip for a few minutes has been known to ^{where apparently death has been induced} produce respiration ~~from~~ ^{by} transient causes.

4 Impregious made upon the soles of the feet by tickling them, also by strong irritants have had in some instances a prompt effect in this disease.

✓ 6 In favor of the Application of Stimulants to the Windpipe, Dr. Jones relates the following facts in his Vulgar errors in medicine. A Gentleman ~~to~~ in Devonshire who had lived fully, died and was laid out in state. His Butler went into the room where he lay in order to give each of the persons who watched his corpse

during the night a glass of brandy. When he came to the body of his former master he said "Come old gentleman I will not pass you. You shall have a glass now you are dead of what you loved ~~so much~~ while you were alive" & then opening his mouth he poured ~~it~~ ^{it} into a glass of the spirit some of which passed thro his Glottis into his Windpipe, and excited a cough which set the blood of his whole body in motion, and thus brought back his life. The mode of exciting the Lungs which has been suggested by this accident is capable of being improved by employing Substances more Active than Air to excite the Action of the Lungs, ~~and thus~~ to produce recuperation.

I shall now mention certain additional remedies ^{for Asphyxia} suited to its particular Causes.

1 When Asphyxia arises from Offensive Matters

[Faint, illegible handwriting in cursive script, likely bleed-through from the reverse side of the page.]

8

in the stomach, a solution of Tartar emetic, or ^{of} the Sulphate of Zinc should be conveyed by a tube into the stomach in order if possible to excite a vomiting. If this be impracticable, powerful irritants should be applied to a part or the whole of the parts of the body before mentioned.

2 In Asphyxia from Cold, the additional remedy, of warmth a few degrees above the temperature of the body applied in the form of air or water will be proper.

3 In Asphyxia from drowning the remedies should be besides those which have been mentioned, the extraction of water from the lungs by means of an instrument contrived for that purpose by Dr Goodwin. The Doctor has proved that death is not induced by this water in the lungs, but by the want of the usual stimulus

of oxygen upon them.

[It has often been asked why a body which has perished from drowning, first sinks, & in the course of a day or two, or a longer time floats upon the surface of the water.

To this question I answer, the body in its first immersion contracts from cold, or fear, or both, at which time it becomes specifically heavier than the water. When this contraction is relaxed by death, the body rises and floats upon the surface of the water from its specific gravity becoming the same as that of the water. It is probable life is not completely extinguished, until the contraction of the body is completely resolved. Perhaps the extrication of air from the contents of the bowels and its diffusion thro' the bowels may help to elevate it upon the surface of the water.]

[Faint, illegible handwriting in cursive script, likely a letter or manuscript page.]

9

4 Asphyxia from hanging has been supposed to arise from a stoppage of the reflux of blood from the brain, but late experiments prove that it is induced wholly by the stoppage of respiration. Bloodletting is commonly prescribed for it under a belief that the disease was an Apoplexy, but it is very improper. The remedies formerly recommended, particularly the excitement of the lungs should be relied upon for a cure.

5 Asphyxia from Carbonic acid gas, Contagious and miasmatic exhalations should be treated with all the remedies that have mentioned & particularly with fresh air. Its efficacy is strongly enforced by the case recorded by Dr. Sydenham of a man who was supposed to be dead from the small pox, being revived & cured by opening the windows in which ^{he} ~~his body~~ was laid, and placing him in a stream of

[Faint, illegible handwriting in cursive script, likely bleed-through from the reverse side of the page. The text is written in dark ink on aged, slightly discolored paper.]

fresh Air with nothing but a winding sheet upon his body.

6 Asphyxia from Lightning it is said has been cured by the application of Electricity to parts of the body that have not been injured by the lightning. I mentioned some facts in support of this remedy in our Therapeutics.

7 Asphyxia from Intoxications has often been cured by the Affusion of Cold Water upon the head. When Drunkenness was more common in our City than it is at present, I have seen it cured by dragging the patient to a pump & pumping ^{water} upon him for ten, or fifteen minutes. The cure has been so complete by this remedy, that the patient has walked home without staggering from the place where it was used.

The first of these is the fact that the
 system of taxation is now being
 reformed. The second is the fact that
 the system of justice is now being
 reformed. The third is the fact that
 the system of education is now being
 reformed. The fourth is the fact that
 the system of public works is now being
 reformed. The fifth is the fact that
 the system of public health is now being
 reformed. The sixth is the fact that
 the system of public safety is now being
 reformed. The seventh is the fact that
 the system of public order is now being
 reformed. The eighth is the fact that
 the system of public morality is now being
 reformed. The ninth is the fact that
 the system of public religion is now being
 reformed. The tenth is the fact that
 the system of public science is now being
 reformed. The eleventh is the fact that
 the system of public art is now being
 reformed. The twelfth is the fact that
 the system of public literature is now being
 reformed. The thirteenth is the fact that
 the system of public history is now being
 reformed. The fourteenth is the fact that
 the system of public geography is now being
 reformed. The fifteenth is the fact that
 the system of public astronomy is now being
 reformed. The sixteenth is the fact that
 the system of public meteorology is now being
 reformed. The seventeenth is the fact that
 the system of public botany is now being
 reformed. The eighteenth is the fact that
 the system of public zoology is now being
 reformed. The nineteenth is the fact that
 the system of public medicine is now being
 reformed. The twentieth is the fact that
 the system of public law is now being
 reformed. The twenty-first is the fact that
 the system of public politics is now being
 reformed. The twenty-second is the fact that
 the system of public economics is now being
 reformed. The twenty-third is the fact that
 the system of public sociology is now being
 reformed. The twenty-fourth is the fact that
 the system of public psychology is now being
 reformed. The twenty-fifth is the fact that
 the system of public philosophy is now being
 reformed. The twenty-sixth is the fact that
 the system of public ethics is now being
 reformed. The twenty-seventh is the fact that
 the system of public aesthetics is now being
 reformed. The twenty-eighth is the fact that
 the system of public logic is now being
 reformed. The twenty-ninth is the fact that
 the system of public metaphysics is now being
 reformed. The thirtieth is the fact that
 the system of public theology is now being
 reformed. The thirty-first is the fact that
 the system of public science is now being
 reformed. The thirty-second is the fact that
 the system of public art is now being
 reformed. The thirty-third is the fact that
 the system of public literature is now being
 reformed. The thirty-fourth is the fact that
 the system of public history is now being
 reformed. The thirty-fifth is the fact that
 the system of public geography is now being
 reformed. The thirty-sixth is the fact that
 the system of public astronomy is now being
 reformed. The thirty-seventh is the fact that
 the system of public meteorology is now being
 reformed. The thirty-eighth is the fact that
 the system of public botany is now being
 reformed. The thirty-ninth is the fact that
 the system of public zoology is now being
 reformed. The fortieth is the fact that
 the system of public medicine is now being
 reformed. The forty-first is the fact that
 the system of public law is now being
 reformed. The forty-second is the fact that
 the system of public politics is now being
 reformed. The forty-third is the fact that
 the system of public economics is now being
 reformed. The forty-fourth is the fact that
 the system of public sociology is now being
 reformed. The forty-fifth is the fact that
 the system of public psychology is now being
 reformed. The forty-sixth is the fact that
 the system of public philosophy is now being
 reformed. The forty-seventh is the fact that
 the system of public ethics is now being
 reformed. The forty-eighth is the fact that

 the system of public art is now being
 reformed. The fifty-fourth is the fact that
 the system of public literature is now being
 reformed. The fifty-fifth is the fact that
 the system of public history is now being
 reformed. The fifty-sixth is the fact that
 the system of public geography is now being
 reformed. The fifty-seventh is the fact that
 the system of public astronomy is now being
 reformed. The fifty-eighth is the fact that
 the system of public meteorology is now being
 reformed. The fifty-ninth is the fact that
 the system of public botany is now being
 reformed. The sixtieth is the fact that
 the system of public zoology is now being
 reformed. The sixty-first is the fact that
 the system of public medicine is now being
 reformed. The sixty-second is the fact that
 the system of public law is now being
 reformed. The sixty-third is the fact that
 the system of public politics is now being
 reformed. The sixty-fourth is the fact that
 the system of public economics is now being
 reformed. The sixty-fifth is the fact that
 the system of public sociology is now being
 reformed. The sixty-sixth is the fact that
 the system of public psychology is now being
 reformed. The sixty-seventh is the fact that
 the system of public philosophy is now being
 reformed. The sixty-eighth is the fact that
 the system of public ethics is now being
 reformed. The sixty-ninth is the fact that
 the system of public aesthetics is now being
 reformed. The seventieth is the fact that
 the system of public logic is now being
 reformed. The seventy-first is the fact that
 the system of public metaphysics is now being
 reformed. The seventy-second is the fact that
 the system of public theology is now being
 reformed. The seventy-third is the fact that
 the system of public science is now being
 reformed. The seventy-fourth is the fact that
 the system of public art is now being
 reformed. The seventy-fifth is the fact that
 the system of public literature is now being
 reformed. The seventy-sixth is the fact that
 the system of public history is now being
 reformed. The seventy-seventh is the fact that
 the system of public geography is now being
 reformed. The seventy-eighth is the fact that
 the system of public astronomy is now being
 reformed. The seventy-ninth is the fact that
 the system of public meteorology is now being
 reformed. The eightieth is the fact that
 the system of public botany is now being
 reformed. The eighty-first is the fact that
 the system of public zoology is now being
 reformed. The eighty-second is the fact that
 the system of public medicine is now being
 reformed. The eighty-third is the fact that
 the system of public law is now being
 reformed. The eighty-fourth is the fact that
 the system of public politics is now being
 reformed. The eighty-fifth is the fact that
 the system of public economics is now being
 reformed. The eighty-sixth is the fact that
 the system of public sociology is now being
 reformed. The eighty-seventh is the fact that
 the system of public psychology is now being
 reformed. The eighty-eighth is the fact that
 the system of public philosophy is now being
 reformed. The eighty-ninth is the fact that
 the system of public ethics is now being
 reformed. The ninetieth is the fact that
 the system of public aesthetics is now being
 reformed. The hundredth is the fact that
 the system of public logic is now being
 reformed.

8 Asphyxia from violent emotions of mind require no ~~sp~~ other remedies than those mentioned under our general head.

After a ~~long time of~~ recovery from Asphyxia, the System sometimes reacts with so much force, as to require bleeding to reduce it. This should never be omitted when indicated. From neglecting it, Chronic Diseases & death have sometimes followed a supposed cure of apparent death.

I have thus mentioned all the usual Remedies for Asphyxia, & some new ones. ~~I shall only add that they are not proper in the present case.~~
 The same remedies are often used for what is called a Trance, but very

improperly when it follows a chronic disease, or an exhausted state of the excitability of the system. The most lenient Stimulants only are proper in these cases. Perhaps in most cases it would be safest to leave the patient in a warm bed, and in an airy room, wholly to the influence of the ordinary Stimuli that support animal life.

The signs of death are 1 a Clamminess of the Skin, 2 an Acid or Alkaline odor issuing from the body. 3 a total relaxation of the Sphincter Ani, & 4 the Sator which accompanies putrefaction. This Sator ^{I acknowledge} sometimes takes place in malignant fevers without being followed by death. Sir John Pingle takes notice of it. I have

once seen it, and a recovery take place af-
 -terwards in a young lady in this city, for
 which reason it should ^{never} ~~not always~~ be relied
 on without the previous marks concerning
 with it. In all cases where the transition
 from apparent health to death ^{has been sudden}, or where
 a disease has terminated in death prema-
 -tely, or before it has run its ordinary
 and ~~both~~ without an obvious fatal cause,
 course, ^{interment} should be delayed until
 more or less of the signs of death have taken
 place, and the body should be kept in
 a situation favorable to its resuscitation,
 & remedies should be employed for that
 purpose.

There can be no doubt but that
 many persons have been buried, ^{who have} ~~been~~ the
 seen apparently dead, only, from the

neglect of the above circumstances. Humanity has often often shuddered at the thoughts of it, but there is no cessation for sympathy as far as it relates to pain and suffering in these cases, for resuscitations can never take place in a tight coffin either in the grave or out of it to such a degree as to excite either consciousness, or pain. —
